I don't feel this is any kind of college level book there are so many errors that it is driving me crazy. How can you call this a high quality math book when it has so many errors. Both in the text, on the video cd and with the online component. Here is an example word problem missing key information. Maggie Vitteta, single, works 36 hours per week at \$11 an hour. How much is taken out for federal income tax with one withholding exemption? (Assume the overtime for each employee is a time-and-a-half rate after 40 hours.) (Use Table 9.1 and Table 9.2) (Round your answer to the nearest cent.) Table 9.2 is based on the persons payroll period, meaning if they are paid weekly,

biweekly, semimonthly or monthly. You could easily assume that the question means she is paid weekly but in a word problem it could also mean that you are to calculate total gross income based on a monthly pay period with 36 hours each week. It doesn't specify how Maggie is paid. Lots of vague word problems that are missing key information. And equations that are simply just wrong.

I was rather disappointed that the book did not come with the handbook considering it is a necessary part of the book.

Was needed to complete my required math courses

Great book.

This "brief edition" only covers chapters 1-12 of the 20 plus chapters from the original edition. Not sure how this is supposed to be helpful or useful for a business math class.

I was thinking it would come with a registration card still.... I suppose it makes sense that it does not.

It was all messy and some pages coming apart. Look very old and not well taking care of.
