Solar System [With Book] (Rock 'n Learn)

Synopsis

Cool songs and rap teach kids about the solar system. This is a great way to learn the order of the planets and facts about each planet, such as size, distance from the sun, satellites, terrain, composition, temperatures and more. A lyrics book includes illustrations and highly detailed photos from NASA. Full color.

This cassette and book combination is an excellent learning tool for children who wish to know more about the planets in our solar system. It has excellent songs and many great facts about the order of the planets and the planets themselves. My five and six and a half year old daughters have known all the planets names and the order of the planets from the sun for at least 2 years because of this book/cassette combination. The book has the words to the song and vivid pictures of each planet. I highly recommend it for children (and parents who might have forgotten their grade school science!).

rip off big time... bought this product with them saying that the cd was included.... however was not informed about them not having the cd until I looked at my email 2 days late when they told me that

I had 2 days to contact them to let them know if I still wanted this without the cd... however I am mad due to the fact that they could have lowered the cost of this item since they did not have the cd included..... never going through these people again.

The facts and music compliment each other perfectly. The music helps you remember information about the planets and is actually tuneful. Highly recommended.

The book is what I expected and received it in good shape. I was disappointed the CD did not come with it. I was under the impression it was included?

It was to have a DVD with it, all I got was a book. I did get some money back but felt ripped off!
